

# Oberon Pi Quick Reference

## Basic mouse commands

Left Click	Set cursor
Middle Click	Execute command
Right Click	Select item

## Scroll bar commands

Left Click	Scroll document down
Right Click	Scroll document up
Shift Left Click	Jump to end of document
Shift Right Click	Jump to beginning of document
Middle Click	Jump to specific part of document

To scroll the document by fewer lines of text, click near the *top* in the scroll bar.  
To scroll by more lines at once, click near the *bottom* in the scroll bar.

## Text edit commands

Left Click	Set text cursor
Right Click	Select character
Right Click Twice	Select word/command name/file name
Left Drag	Move text cursor one character left or right
Right Drag	Extend text selection
Shift Right Click	Change text selection

The standard keyboard shortcuts are defined for the following editing commands:

Ctrl-X	Edit.Cut
Ctrl-C	Edit.Copy
Ctrl-V	Edit.Paste
Ctrl-Z	Edit.Undo

Before using these commands, you must first set the *text cursor* in the window you are editing. Doing this lets the system know which window is being edited.

## Window selection

Left Click	Select window for text editing
Ctrl-A	Select window for window operation

All text-editing commands require a window to be selected for editing. This is done by setting the *text cursor* in the window (with Left Click).

Certain system commands require a window to be selected for window operations. This is done by setting the *marker symbol* in the window (with Ctrl-A).

## Escape key

Esc	Erase text cursor, marker symbol, and all text selections
-----	---

## Change marker

The *change marker* is a small hollow square in the upper-right corner of a text window. It appears if you make any editing changes in the window.

## Directory command

```
System.Directory *.Mod  
System.Directory Hello*!
```

Use the wildcard character `*` to list multiple files, and the exclamation point `!` to list the file date and size.
